# Globally Important Agricultural Heritage Systems (GIAHS)

**Globally Important Agricultural Heritage Systems (GIAHS)**

**Worldwide, specific agricultural systems and landscapes have been created, shaped and maintained by generations of farmers and herders based on diverse natural resources, using locally adapted management practices.** Building on local knowledge and experience, these ingenious *agri-cultural* systems reflect the evolution of humankind, the diversity of its knowledge, and its profound relationship with nature. These systems have resulted not only in outstanding landscapes, maintenance and adaptation of globally significant agricultural biodiversity, indigenous knowledge systems and resilient ecosystems, but, above all, in the sustained provision of multiple goods and services, food and livelihood security and quality of life.

**In order to safeguard and support world's *agri-cultural heritage* systems in 2002 FAO started an initiative for the conservation and adaptive management of Globally Important Agricultural Heritage systems (GIAHS).** The initiative aims to establish the basis for international recognition, dynamic conservation and adaptive management of Globally Important Agricultural Heritage Systems (GIAHS) and their agricultural biodiversity, knowledge systems, food and livelihood security and cultures throughout the world.

The GIAHS initiative has identified pilot sites in Peru, Chile, China, Philippines, Tunisia, Algeria, Kenya and Tanzania. In these pilot systems dynamic conservation management approaches will be developed and implemented, to assist national and local stakeholders in the conservation and adaptive management of the systems and their components.
